Professional Summary

Frontend Developer and Systems Engineering student with experience in building modern, interactive, and high-performance web interfaces. Specialized in translating high-fidelity designs into clean code using React, Tailwind CSS, and fluid animations with GSAP. Backed by a solid technical foundation in web architecture, Headless WordPress development, and cybersecurity fundamentals, oriented toward delivering digital products that combine stellar aesthetics with technical functionality.

Technical Projects / Experience

Petmap — UI & Frontend Interface

- Responsible for the design and development of the frontend, implementing an intuitive and fluid user interface using React.
- Collaborated in technical environments for data integration and real-time map visualization, ensuring an optimal user experience.

PartnerCR — High-Impact Interactive Web

- Frontend development based on high-fidelity designs.
- Integrated Headless WordPress to ensure efficient content management and applied advanced animations with GSAP to boost user retention and engagement.

Freelance Web Development & WordPress Projects

- End-to-end development and customization of corporate websites and blogs optimized for performance and technical SEO.
- Optimized web structures to guarantee reduced load times, mobile responsiveness (Responsive Design), and client self-management.
